

# *Fine Line Tattoo* \_\_\_\_\_

## **SPECIAL CARE GUIDE**

Due to the delicate nature of fine line work, special attention during the healing process is crucial to ensure the longevity and clarity of your tattoo.

### **GENTLE TOUCH**

Fine line tattoos are particularly sensitive to pressure and friction. When cleaning or applying aftercare products, use a soft, gentle touch to preserve the integrity of the fine lines.

### **SUN EXPOSURE**

Once healed, protect your fine line tattoo from the sun with a high-SPF sunscreen. Continuous sun protection will help prevent fading and maintain the crispness of the lines.

### **MOISTURE MANAGEMENT**

Short, lukewarm showers are best. Avoid direct water spray on the tattoo and no soaking until fully healed. Keep the tattooed area moisturized but not overly wet.

### **MINIMIZE STRETCHING**

Avoid activities that excessively stretch the tattooed area for the first 2 weeks. Excessive stretching can cause fine lines to warp or blur as the skin heals.

### **HEALING**

Fine line tattoos might appear healed on the surface sooner, but full healing still requires time. Maintain aftercare practices until the tattoo is fully settled, even if it looks healed from the outside.

### **TOUCH UPS**

Due to the technique used, your tattoo will likely lighten a bit as it heals. If it heals too light, reach out to me and we can chat about next steps. Fine line tattoos may require touch-ups to maintain their precision over time.
